Your10&95: Periodic lane closures on Fuller Warren Bridge southbound Periodic detour for on ramp to I-95 SB from Park Street

Jacksonville – Your10&95 interchange operational improvements project will have periodic overnight lane closures on the Fuller Warren Bridge on Interstate 95 southbound between Park Street and San Marco Boulevard from 8 p.m. to 5:30 a.m., January 9-15 for bridge foundation construction from the top of the Fuller Warren Bridge, depending on weather and unforeseen circumstances.

Motorists can also expect periodic closures of the Interstate 95 southbound on ramp from Park Street during that same timeframe from 8 p.m. to 5:30 p.m., January 9-15, and will use the following detour:

Motorists will take Park Street to Forest Street and turn right onto Forest Street. They will then need to turn left onto Riverside Avenue and merge right onto the Acosta Bridge on ramp which will connect with Interstate 95 southbound (see attached map).

The earlier planned traffic shift on Interstate 95 southbound on the Fuller Warren Bridge was postponed due to the recent winter storm and will be rescheduled for later this month. Further information will be provided when a date has been set.

The Fuller Warren Bridge will be adding an additional lane in each direction along with a new [Shared Use Path](#) (SUP) which will be constructed on the southbound side of the bridge parallel to traffic lanes for pedestrians and bicyclists. The new SUP will connect Riverside and San Marco communities.

Your10&95 project began in May with completion anticipated in summer of 2020, depending on weather and unforeseen delays.

FDOT hired Archer Western as the contractor to complete this project for \$126 million.
